SKILLS

- Programming Languages: C, C++, Java, Python, PHP
- Database Experience: MySQL, Oracle
- Operating Systems: Linux
- Frameworks: CodeIgniter (PHP), Django (Python)

Project Experience

Inventory Management System for Green Energy Corporation

October 2014 - April 2015

<http://greenenergybd.net>

It is a web-based application for managing inventory, bill generation and daily sales records & analysis for Green Energy Corporation. It was built using CodeIgniter framework and MySQL as the database.

Intelligent Job search and Recommender system

January 2015 - March 2015

It is a web based job search system built using the Django Framework of Python and Scikit-learn library for machine learning. It showed preferred jobs to the users searching for jobs and preferred candidates for a job to the employers based on a previously learned database.

Initiative Tracker

2013

It was a web-based application to track the daily sales and progress of the sales-persons around the country for International Brands Ltd.. It was built using CodeIgniter framework and MySQL as the database.

Simulator for Battleship Game

May 2015

<https://github.com/bh00t/battleship>

It is a simulator built in java for "Inter-University AI Challenge-2015" held in BUET. The simulator runs the programs written by two players to play a variant of the classic "Battleship" game. Players can write their AI in any language as long as it produces a binary executable. The simulator tracks the progress of the players and shows the turn by turn moves of the players in an animated graphical screen.

LAN Torrent

2011

<https://github.com/bh00t/Lan-Torrent>

It is a java application. It is an implementation of torrent client and tracker in LAN. Multiple users could connect and share files in a LAN using this software.

Hall Management

It is a web-based application to manage the seat-allocation and student database for a hostel.
